contents

14 **sustainable** lifestyle

John Ivanko & Lisa Kivirist

Sustainability is the measure of success for the Inn Serendipity Bed and Breakfast, which uses sun and wind for electricity and solar thermal energy too.

26 **solar** cheese

Brad Albert

The historic Vella Cheese factory in Sonoma, California, embraces solar electricity, and cashes in on substantial incentives.

34 **straw bale** construction

Jeff Ruppert

The lowdown on load-bearing vs. post-and-beam construction of straw bale structures. Check out the pros and cons of each.

42 **wind** basics

Hugh Piggott

The straight scoop on deriving realistic energy expectations for a wind energy system.

46 **RE** education

Paolo Savelli

Solar and wind workshops benefit aspiring techies and system owners alike at a general store in Washington's San Juan Islands.

On the Cover

The Anderson family in front of the PV array and wind generator that sell clean electricity to the grid at their general store on Guemes Island, Washington.

54 **small solar**

Penny Loeb

A small horse barn across the property from the utility grid was the perfect place for solar-electric lights and fans.

58 **community PV**

Laurie Stone

TV with PV? In Cuba, solar electrification of community centers in remote areas supports education with, yes, televisions.

62 **lessons learned**

Elliot Burch & friends

Troubleshooting battery problems in off-grid PV systems in Belize reveals a list of typical system design and maintenance lessons.

70 **load analysis**

Scott Russell

The first step in designing a renewable energy system is to evaluate your needs—how to calculate your energy appetite.

76 **ecological footprint**

Tony Pereira

Measuringing absurdity: our demand vs. our supply.

88 **heating & cooling**

Steve Baer

An experimental system uses solar thermal collectors to provide wintertime warmth, or radiate heat at night for summertime cooling.

94 **MPPT project**

Tim Nolan

The basics of maximum power point tracking.

100 **hybrid vehicle**

Allen Patterson

The nitty gritty details of the most progressive production car ever built.

Regulars

10 From Us to You

Michael Welch

It's easy to get involved with RE education.

82 REview

Ian Woofenden

African Wind Power 3.6 wind generator.

92 What the Heck?

Chuck Marken

Low-iron tempered glass.

106 Book Review

Rachael Ware

& Laurie Stone

The New Strawbale Home.

108 Code Corner

John Wiles

PV grounding.

112 Independent Power Providers

Don Lowebug

Redefining the grid.

114 Power Politics

Michael Welch

PV shortage!

118 Word Power

Ian Woofenden

Conservation defined.

120 Home & Heart

Kathleen

Jarschke-Schultze

What's so different?

134 Ozonal Notes

Richard Perez

Technology as social change.
